Updating the Slow Dough website

MANAGER QUICK GUIDE · DAILY MENU · BLOG · DOUGH ANNOUNCEMENT · OPENING HOURS

Editor: `smagara.github.io/SlowDoughPizzaSite_Sveltia/admin/`
Sign-in: your GitHub account (you must be a collaborator)
Works best in Chrome or Edge on a laptop

What you can change yourself

- **Daily Menu** — sections, items, descriptions, prices, dietary badges
- **Blog Posts** — write, edit or hide essays in “The Baker’s Journal”
- **Dough Announcement** — the dark strip at the top of every page
- **Opening Hours** — times and notes for each day

How publishing works

- You edit and click **Save**, then **Send for Review**.
- Your change is packaged as a *pull request* on GitHub — the live site is **not** changed yet.
- A reviewer approves it; the website updates itself about 2–3 minutes later.
- Nothing you do in the editor can break the live site — every change is checked and reviewed first.

1 Open the editor and sign in

Scroll to the very bottom of the website and click the small pen icon ✎ next to “All dough aged with patience.” (it is faint until you hover over it), or type the editor address above.

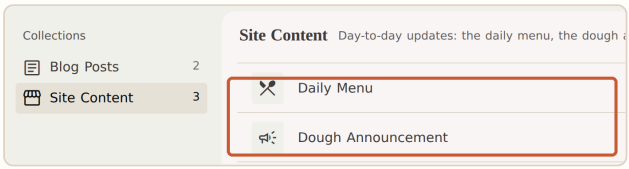

Click **Sign In with GitHub** and approve the request in the GitHub window. (If the site owner gave you an *access token* instead, use “Sign In Using Access Token” and paste it once — your browser remembers it.)

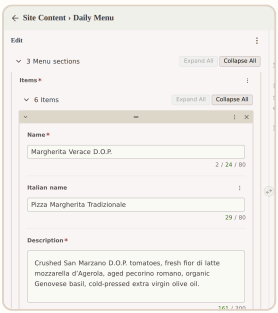

2 Pick what you want to change

On the left, choose **Blog Posts** or **Site Content**. Site Content holds the **Daily Menu**, **Dough Announcement** and **Opening Hours** — click one to open it.

3 Make your change

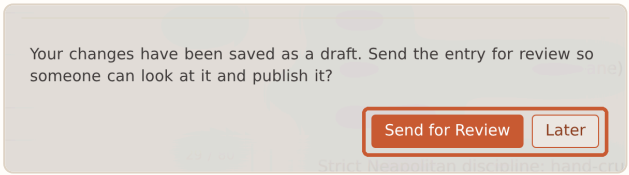

Menu sections and items are folded up — click **Expand All** or the small arrow on a row. Change the text or price, drag the **=** handle to reorder, use **+ Add Item** / **×** to add or remove. The right-hand pane previews your text.

> Green counters such as **24 / 80** show how much room is left in a field. Badges (Vegetarian, Spicy…) are chosen from a list.

4 Save, then Send for Review

Click **Save** (top right). The editor confirms that your change was saved as a draft and asks whether to send it for review — click **Send for Review**.

The item now shows In Review. Choose **Later** only if you want to keep editing before anyone looks at it; the change then waits as a Draft until you send it.

5 Wait for approval — then it’s live

The reviewer (site owner / developer) gets your change as a GitHub pull request, reads exactly what changed, and approves it. The website rebuilds itself and your update appears a few minutes later — no further action needed from you.

Follow progress on the **Editorial Workflow** board (branch icon at the top of the editor): **Drafts → In Review**. Once approved and merged, the card disappears and the change is on the site.

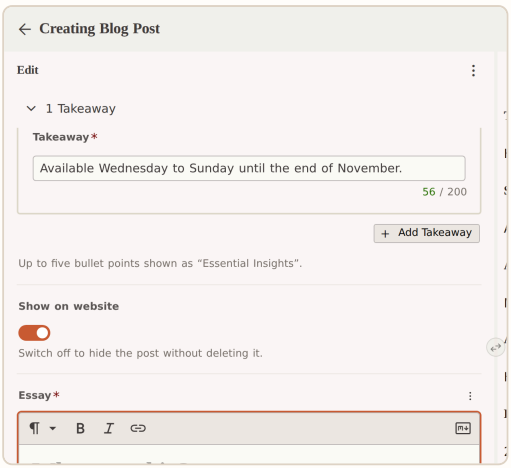

Writing a blog post

Open **Blog Posts → New**. Fill in the **Title**, a one-line **Subtitle**, **Author**, the **Publish date** (posts are listed newest first), choose an **Illustration** and write a short **Excerpt** for the card. Add up to five **Key takeaways** — they appear as “Essential Insights”.

Write the **Essay** in the large box. Use the toolbar (or type at the start of a line): **Heading 2** (`##`) for section titles, **Quote** (`>`) for a pull-quote, **Bold**/**Italic**, bullet lists and links. Plain text only — the site applies the fonts and colours.

Show on website hides a post without deleting it (e.g. a seasonal post). Editing an existing post works the same way: open it from the list, change, Save, Send for Review.

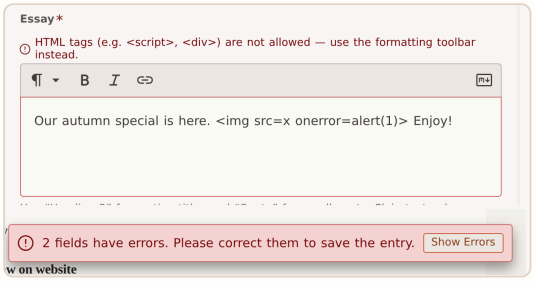

> The file name (“slug”) is made from the title when you first save — keep titles short and descriptive. Duplicate a post from the ⋮ menu to reuse its structure.

Rules the editor enforces

The form checks your text when you click Save. If something is wrong, the field is outlined in red with a message and a banner says how many fields need attention — the change is **not** saved until they are fixed.

- Required fields (marked *) cannot be empty.
- Every text field has a maximum length (see the counter).
- The characters **<** and **>** and anything that looks like web code (such as **<script>** or ** **) are not allowed — paste plain text only. Copying from Word or a web page can bring hidden code along; if you see this error, retype the sentence.
- Prices are numbers between 0 and 500 (use 12.5 for $12.50). The Opening Hours always list seven days — change the times and notes, not the days.

If something looks wrong

What you see	What to do
My change is not on the website yet.	It has probably not been approved yet — check the Editorial Workflow board. After approval, allow 2–3 minutes and refresh the page (Ctrl/⌘ + Shift + R).
“You don’t have access to the repository.”	Your GitHub account is not a collaborator on the website repository. Ask the site owner to add you (Settings → Collaborators) and sign in again.
“N fields have errors.”	Click **Show Errors**, fix the outlined fields (see the rules above) and Save again.
The editor shows old text, or says “the branch has moved”.	Reload the editor page — it fetches the latest content from GitHub. If someone else changed the same item, re-open it and redo your edit.
I want to change or undo something.	Still “In Review”: open the item again, edit and Save — the same request is updated; or discard it with the ↶ button on its card on the board. Already live: make the opposite change, or ask the reviewer to revert it on GitHub.

Good to know: sign out (account menu, top right) on a shared computer; never paste your access token into a message or document.
